Initial Release Notes IP 700 Series Phones

Firmware Version 1.3.3
November 30, 2007

Overview

The new IP 700 series IP Phones from ADTRAN are available to our IPT Dealers to be installed with the NetVanta 7100. Since this is the first release of these phones, we felt it was necessary to ensure our IPT Dealers know the major functional differences between our new phones and our existing co-brand ADTRAN/Polycom phones. We have worked hard to ensure our new phones are intuitive and functional. There are however a couple of areas listed below that represent items/functions that do not act as expected when compared to our co-brand ADTRAN/Polycom phones. Some of these items are a high priority and will be resolved in a future release of firmware. See [Appendix A](#) for Related Documentation.

- **GUI Support in the 7100:** NetVanta 7100 firmware version A1.01.00 will add GUI support for building IP 700 phone configurations. Until that version is released, the phone configurations must be built manually.

Notices for Version 1.3.3

The following is a list of notices for the initial firmware release of the IP 700 Series Phones (Version 1.3.3)

Mute Operation

Detail

- While mute is enabled on the phone, switching between speakerphone, headset, or handset will cause the mute to be disabled on the phone.

Solution

- Re-enable mute after switching between speakerphone, headset and handset.

Shared Line Account Transfer

Detail

- The transfer key does not automatically select a second line on a SLA call.

Solution

- Press the Transfer key, and then select a second line. When dialtone is heard, dial the number, then press the Transfer key to transfer the call.

Answer Softkey Operation

Detail

- Pressing this key on the first incoming call will answer the call. Pressing this key on the second incoming call (while still on the original call) will only ignore the call waiting notification.

Solution

- Press the line key to answer the second call or place the first call on Hold and then press Answer.

Shared Line Account Key Label

Detail

- When a SLA line is active, the line label disappears.

Solution

- This will be resolved in a future release of firmware for the IP 700 Series Phones.

Park Zone and Status Group/BLF

Detail

- One touch park/retrieve via a BLF key is not currently supported in the IP 700 Series Phones.

Reference

- See user documentation for information on Park/Retrieve procedures on the IP 700 Series Phones.
