

- Vlan 5 should always have access to Internet using my local proxy server
The PCs will have the proxy's ip address hardcoded in IE. Group Policy is restricting tampering
- 1335-1 is the dhcp for Vlan 5
- Int vlan 5 on 1335-1 has ip add 192.168.5.1
- Int vlan 5 on 1335-2 has ip add 192.168.5.2
- I need failover for Vlan 5 shiwch is DATA ONLY
- If either ISP goes down, phones have POTS going to them so I don't need rerouting for Voice
