Q&A

Do the Total Access 750 and 850 use the same V.35 module?

Q: Do the Total Access 750 and 850 use the same V.35 module?

A: No, they do not. The V.35 module for the TA 850 is smaller than the module used in the 750. It must also be used in the special slots (A, B). The V.35 module will only be used in the TA 850 when using the BCU L1 or BCU L2. The RCU has integrated V.35 support.
