Q&A

TSU Timing Configuration with the Drop and Insert Module

___

Q:

TSU Timing Configuration with the Drop and Insert Module

A:

The timing for the TSU and the Drop and Inert module should be set for Network if the timing for the T-1 circuits is coming from the Network port of the TSU.

In the event the timing is coming from the Drop and Insert (Secondary) T1, both the TSU and the module should be set for Secondary timing.
