Q&A

What is the DSX-1 port on the TSU IQ+?

Q: **What is the DSX-1 port on the TSU IQ+?**

A: The DSX-1 port is a short-haul T1 with a maximum range of 655 ft. The framing format (ESF/D4) and line code (B8ZS/AMI) options can be set independently of the network port. For example, if the network port is set for ESF/B8ZS, the DSX-1 port can be set for D4/AMI or any other combination. The most common use for this port is to deliver specific channels from a service provider T1 (connected to the network port) to a PBX connected to the DSX-1 port.
